BuiltHub

D7.4 Project Flyer

Project acronym	BuiltHub
Full title	Project Flyer
Ga no	957026
WP, Deliverable #	7.4
Date	29.07.2021
Dissemination Level	Public
Deliverable lead	ICLEI
Author(s)	Emilie Doran, ICLEI Laura Schubert, ICLEI Roman Mendle, ICLEI
Reviewer(s)	Nazie Amisulashvili, EURAC Ulrich Filippi Oberegger, EURAC
Keywords	Flyer, Brochure, Community, Users, Activities, Platform, Data, Building, Engagement

This project flyer is a clear, concise and visual explanation of the BuiltHub project. It communicates the planned project activities and community of users, as well as the planned capabilities of the BuiltHub platform. The flyer also acts as a useful tool to inform readers how they can get involved in the project.

This project has received funding from the EU's Horizon 2020 programme under grant agreement no 957026.

BuiltHub is a Horizon 2020 project that aspires to develop a community of data contributors and users, with the overarching goal of driving forward an energy transition and the decarbonisation of the EU building stock.

BuiltHub has received funding from the European Union's Horizon 2020 programme under grant agreement N°957026.

About us

The BuiltHub consortium is committed to harnessing the enormous potential of European buildings to create an intelligent and carbon-neutral built environment. Coordinated by Eurac Research, the project is comprised of experts from research centres, not-for-profits and specialist consultancies.

Our individual expertise and stakeholder communities ensure the practicality and accessibility of the final outcomes of the BuiltHub project.

BuiltHub

Better data for EU buildings.

Working for more sustainable and meaningful data flow for a cost-effective and rapid building stock decarbonisation

builthub.eu

What we do

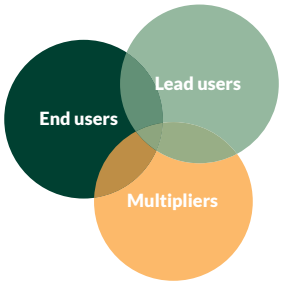
- Establish an active community of data providers and users, including projects, initiatives, individuals and other stakeholders
- Create a web-based data hub offering a data repository and information platform
- Define a standardised data management approach for a reliable building stock status and progress analysis
- Foster a resilient and durable data collection and sharing culture
- Enable the design of more effective sustainable building and renovation policies, programmes, projects and financing schemes

About the community

BuiltHub will foster a Europe-wide community interested in knowledge about the EU building stock and its transition.

In order to collect useful data and evolving services, the project needs to engage building industry stakeholders, to tailor to their needs and gain their feedback.

The community and platform are comprised of beneficiaries and contributors, each with varying knowledge, interests and goals.

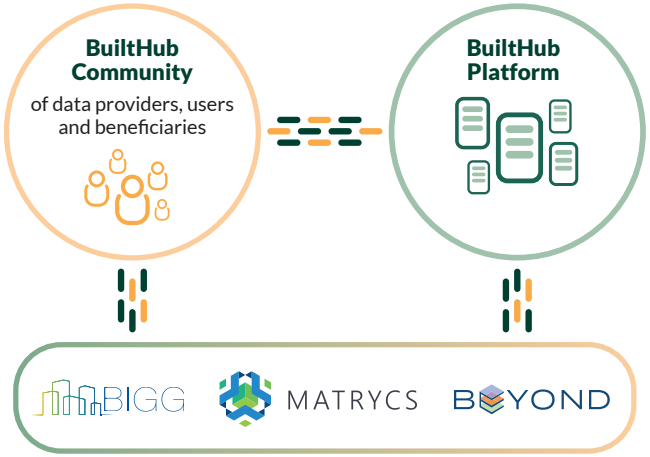


About the platform

The project will develop an inclusive data collection and valorisation method in an accessible web-based platform, enabling a succinct assessment of Europe's building stock.

It will support a long-lasting flow of data through a benefits-based engagement strategy.

BuiltHub will draw on and feed into existing data sets and repositories, such as the EU Building Stock Observatory and Horizon 2020 sister projects BIGG, MATRYCS and BEYOND.



- **Lead users** share data and receive added value in return.
- **End users** extract data, as well as provide feedback.
- **Multipliers** disseminate and promote results.

> *Things get done only if the data we gather can inform and inspire those in a position to make a difference.*
>
> – Mike Schmoker

Get involved!

Keen to make the best use of your data or actively support and shape the design of platform key features? **Become a BuiltHub Pioneer** data hero by joining our project Pioneer User group!

Interested in the project and inspired to help promote responsible data collection?
